

Prior to the COVID-19 outbreak, we had a busy optometric practice with 2 full-time doctors seeing patients every 30 minutes at least 5 days a week. With the current conditions and the need to rehire staff and assist patients with their eye care needs, it was vital to find a way to reopen safely. After extensive research, we decided that UV-C light sterilization would be the best solution. There are many surfaces in our office, including electronics, glasses frames, furniture, and exam equipment that would be damaged by the continual use of disinfectants for cleaning. I initially purchased some compact UV-C lights, but the output was meager and I wasn't confident they were sufficient to keep our staff and patients as safe as possible. After discussing several options with you at Way Too Cool, LLC, your knowledge and testing of UV-C lights made me feel confident that I could safely sterilize the surfaces in our office and exam rooms. I'm loving this twin-bulb 35W unit, it is very well constructed. I can confidently sterilize all surfaces in my 11x10 foot square exam room within 5 minutes. I would recommend Way Too Cool, LLC's UV-C products to anyone in the healthcare industry that would like a better way to keep their environment as safe as possible.
